

## Notes on the function gsw\_specvol\_anom\_standard\_CT\_exact(SA,CT,p)

This function, `gsw_specvol_anom_standard_CT_exact(SA,CT,p)`, evaluates the specific volume anomaly  $\hat{\delta} = \hat{v}(S_A, \Theta, p) - \hat{v}(S_{SO}, 0^\circ\text{C}, p)$  for given input values of Absolute Salinity  $S_A$ , Conservative Temperature  $\Theta$ , and pressure  $p$ . The Standard Ocean Reference Salinity,  $S_{SO}$ , is  $35.165\ 04\ \text{g kg}^{-1}$ . This function uses the full TEOS-10 Gibbs function  $g(S_A, t, p)$  of IOC *et al.* (2010), being the sum of the IAPWS-09 and IAPWS-08 Gibbs functions.

This function is simply two calls to other GSW functions, as follows,

```
t = gsw_t_from_CT(SA,CT,p);
specvol_anom_standard_CT_exact = ...
    gsw_specvol_anom_standard_t_exact(SA,t,p);
```
